Reshaping Data

2016-03-01

2016-03-02

2016-03-01

2016-03-03

2016-03-02

2016-03-0

Pivot

>>> df3= df2.pivot(index='Date', columns='Type', values='Value') Date Type Value

11.432

13.031

20.784

99,906

1.303

20.784

Type Date 2016-03-01 11.432 NaN 20,784 2016-03-02 1.303 13.031 NaN 2016-03-03 99.906 NaN 20.784

Pivot Table

>>> df4 = pd.pivot table(df2, values='Value' index='Date', columns='Type']

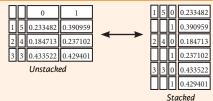

Spread rows into columns

Spread rows into columns

Stack / Unstack

>>> stacked = df5.stack() >>> stacked.unstack()

Pivot a level of column labels Pivot a level of index labels

Melt

>>> pd.melt(df2, id vars=["Date"], value_vars=["Type", "Value"], value name="Observations")

Gather columns into rows

	Date	Type	Value	1		Date	Variable	Observations
		турс		!	0	2016-03-01	Type	a
0	2016-03-01	a	11.432		1	2016-03-02	Type	ь
1	2016-03-02	b	13.031		2	2016-03-01	Туре	С
2	2016-03-01	С	20.784]	3	2016-03-03	Туре	a
Ē	2016-03-03	a	99,906	→	4	2016-03-02	Type	a
믬		a			5	2016-03-03	Type	С
4	2016-03-02	a	1.303		6	2016-03-01	Value	11.432
5	2016-03-03	с	20.784		7	2016-03-02	Value	13.031
					8	2016-03-01	Value	20.784
					9	2016-03-03	Value	99.906
					10	2016-03-02	Value	1.303
					11	2016-03-03	Value	20.784

Iteration

(Column-index, Series) pairs >>> df.iteritems() (Row-index, Series) pairs >>> df.iterrows()

Advanced Indexing

Selecting >>> df3.loc[:,(df3>1).any()] >>> df3.loc[:,(df3>1).all()] >>> df3.loc[:,df3.isnull().any()] >>> df3.loc[:,df3.notnull().all()]

Indexing With isin >>> df[(df.Country.isin(df2.Type))]

>>> df3.filter(items="a","b"]) >>> df.select(lambda x: not x%5) Where

>>> s.where(s > 0)

Query >>> df6.query('second > first')

Also see NumPy Arrays

Select cols with any vals >1 Select cols with vals > 1 Select cols with NaN Select cols without NaN

Find same elements Filter on values Select specific elements

Subset the data

Query DataFrame

Setting/Resetting Index

<pre>>>> df.set_index('Country') >>> df4 = df.reset_index() >>> df = df.rename(index=str,</pre>	Set the index Reset the index Rename DataFrame
--	--

Reindexina

>>> s2 = s.reindex(['a','c','d','e','b'])

Forward Filling

>>>	df.reind	ex(range(4)	,	>>>
		method='	ffill')	
	Country	Capital	Population	0
0	Belgium	Brussels	11190846	1
- 1	India	Nov. Dolhi	1202171025	2

Brazil Brasília 207847528 Brasília 207847528

Backward Filling

	>>>	s3 =	<pre>s.reindex(range(5),</pre>
n	0	3	
	1	3	
5	2	3	
	3	3	
	4	3	

MultiIndexing

```
>>> arrays = [np.array([1,2,3]),
              np.array([5,4,3])]
>>> df5 = pd.DataFrame(np.random.rand(3, 2), index=arrays)
>>> tuples = list(zip(*arrays))
>>> index = pd.MultiIndex.from tuples(tuples,
                                      names=['first', 'second'])
>>> df6 = pd.DataFrame(np.random.rand(3, 2), index=index)
>>> df2.set index(["Date", "Type"])
```

Duplicate Data

>>>	s3.unique()	Return unique values
>>>	df2.duplicated('Type')	Check duplicates
>>>	<pre>df2.drop_duplicates('Type', keep='last')</pre>	Drop duplicates
>>>	df.index.duplicated()	Check index duplicates

Grouping Data

Aggregation >>> df2.groupby(by=['Date','Type']).mean() >>> df4.groupby(level=0).sum() >>> df4.groupby(level=0).agg({'a':lambda x:sum(x)/len(x), 'b': np.sum}) Transformation >>> customSum = lambda x: (x+x%2) >>> df4.groupby(level=0).transform(customSum)

Missing Data

>>>	df.dropna()	Drop Na
>>>	df3.fillna(df3.mean())	Fill NaN
>>>	df2.replace("a", "f")	Replace

Drop NaN values values with a predetermined value values with others

Combining Data

Х3 X1 20.784 a b NaN 20.784

data2

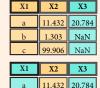

Merge

>>>	pd.merge(data1,
	data2,
	how='outer',
	on='X1')

1.303 NaN

Х3

	,	X1	X2	Х3
11, 12,		a	11.432	20.784
outer',		ь	1.303	NaN
X1')		С	99.906	NaN
	,	d	NaN	20.784

Oin

>>> data1.join(data2, how='right')

Concatenate

Vertical

```
>>> s.append(s2)
```

Horizontal/Vertical

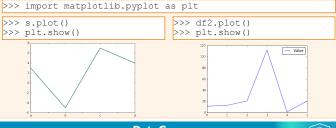

```
>>> pd.concat([s,s2],axis=1, keys=['One','Two'])
>>> pd.concat([data1, data2], axis=1, join='inner')
```

Dates

```
>>> df2['Date'] = pd.to datetime(df2['Date'])
>>> df2['Date']= pd.date range('2000-1-1',
                               periods=6,
                               frea='M')
>>> dates = [datetime(2012,5,1), datetime(2012,5,2)]
>>> index = pd.DatetimeIndex(dates)
>>> index = pd.date range(datetime(2012,2,1), end, freg='BM')
```
